Executive Summary

Overview

The Township of Berkeley is a rural-suburban community of 55.8 square miles in central Ocean County, of which, 42.9 square miles is land and 12.9 square miles is water. The Township is essentially divided in half by the Garden State Parkway, with the Pinelands Management Area to the west of the Parkway and the Coastal Zone Management Area to the east of the Parkway, including Pelican Island, South Seaside Park and Island Beach State Park. Berkeley Township was incorporated as a township by an Act of the New Jersey Legislature on March 31, 1875, from portions of Dover Township (now Toms River Township). Sections of the township were taken to form Seaside Park (March 3, 1898), Seaside Heights (February 6, 1913), Beachwood (March 22, 1917), Ocean Gate (February 28, 1918) Pine Beach (February 26, 1925), South Toms River (March 28, 1927) and Island Beach State Park (June 23, 1933), which was then reabsorbed into Berkeley Township in 1965.

Figure O-1: Berkeley Township regional location.

Berkeley Township experienced rapid growth between 1950 and 1990, with two major growth spurts during the 1950s and 1970s where the population more than doubled in each of those two decades. While growth tailed off between 1990 and 2000, there was a sense in the community that the Township was vulnerable to over development when congestion along the Route 9 corridor was already burdensome,

especially during the summer tourist season. Meanwhile, concern has been mounting about the environmental health of the Barnegat Bay, which is essentially a shallow estuary that has been found to be in decline due to elevated levels of nutrients caused by development-induced stormwater runoff. While the Township has been successful in working with the Ocean County Lands Trust to preserve hundreds of acres of tidal marsh near the Bay, hundreds of acres of upland forest remain vulnerable to piecemeal development in the Pinewald section of town west of Route 9 and significant previously developed brownfield properties along the Route 9 corridor have been economically stagnant for years.

It is with this historical backdrop that the Township has turned to the Transfer of Development Rights (TDR) mechanism, made available by the enactment of the State Transfer of Development Rights Act on March 29, 2004, as a way of shifting development away from the remaining forested areas of Pinewald to the underutilized properties along the Route 9 corridor. The Township's Transfer of Development Rights Program has evolved over the past six years into one that is designed to be relatively easy to participate in and to administer in comparison to programs elsewhere in New Jersey. The program starts with a balance between the credits generated by the five forested Sending Areas and the capacity of the four Receiving Areas to support additional development within a density and intensity that is acceptable to the Township. In order to achieve that balance, the Real Estate Market Analysis (REMA) apportions the development credits or portions of a credit to each vacant privately owned lot in a Sending Area, no matter how small it is (the Sending Areas consist of hundreds of "newspaper subscription lots" that were platted in the early decades of the Twentieth Century and that are typically only 50 feet in width by 100 to 120 feet in depth and most of which front on paper streets and are inaccessible).

Figure O-2: Map of Sending Area B showing haphazard pattern of publicly and privately owned lots

The challenge in the Sending Areas is the large degree of abandonment of many of the lots over the decades by owners who chose not to continue paying taxes for undersized and essentially worthless property. This resulted in the Township owning more than half of the lots, but in a scattered fashion (sees Figure 0-2). To create contiguous forest areas it was determined that the Sending Areas would be preserved from development through a combination of public ownership of lots and paper streets and private lots deed-restricted from

development through the sale of their development credit (compare Figure 0-2 with Map 7). For that reason it was critical to the success of the program that every single privately owned lot have some transferable value (credit or fraction of a credit).

Plan Endorsement

The Berkeley TDR market will be driven by the creation of two Town Centers (Town Center I and II), a mixed use development node and intensification of a Light Industrial Node with development potential increases possible through credit purchase.

Town Center I and II and the Industrial Node have been recognized by the New Jersey State Planning Commission through its granting of plan endorsement to the Township. These Receiving Areas will be able to accommodate increased development under New Jersey Department of Environmental Protection (NJDEP) regulations only after their recognition as centers and nodes by NJDEP under their CAFRA regulations, which is expected in early 2013. Once designated, the impervious coverage possible in Town Center I and II and in the Industrial Node under CAFRA will go from 30% to 70%, more than doubling their developable acreage. The Berkeley Township Land Development Ordinance has been amended through the adoption of a Town Center 2 Overlay District (see Section VI), and amendment of the Light Industrial regulations so that any development beyond 30% impervious coverage in these Receiving Areas will require the purchase of Development Credits (essentially making TDR mandatory to access the additional 40% of the property). The Berkeley Town Center Redevelopment Plan, adopted in August of 2009, already provides for the same intensification for Phase 2 of the Town Center, which is also a receiving area. The emphasis on creating and sustaining value for the Development Credits is intended to make it more attractive to sell the credits and donate the residual land to the Township as a tax write-off than to sell the lot to a developer. The Corridor Node Overlay District also has been adopted by ordinance (see Section VI), but the TDR credit mechanism is not dependent on increased impervious coverage under CAFRA and the overlay district is not formally designated as node under either the State Plan or under CAFRA.

Introduction

Statutory Basis

On March 29, 2004, the New Jersey legislature passed the State Transfer of Development Rights (TDR) Act, the country's first statewide TDR enabling legislation. In December 2004, the New Jersey Department of Community Affairs announced that Berkeley Township was one of six communities selected to participate in a state sponsored TDR demonstration program. Upon being selected to participate in the program, the Township Council authorized the initiation of a TDR program under the State's Transfer of Development Rights Act.

The purpose of the TDR program is to provide an incentive-based process for permanently preserving environmentally sensitive and open space lands that provide a public benefit through their natural state (sending zones). The TDR provisions are intended to preserve land by transferring the development rights associated with a parcel of land in a sending zone to a pre-determined receiving zone. The Receiving Areas are delineated based on their ability to support additional growth and density due to the availability of infrastructure and the absence of severe environmental constraints. The Receiving Areas are also reflective of the Township's vision for guiding growth to well-planned and compact centers and nodes.

This development transfer master plan element has been prepared in accordance with Article 17 of the Municipal Land Use Law, "State Transfer of Development Rights," and will serve as the basis for Berkeley's TDR program and ordinance. Pursuant to the Municipal Land Use Law, a real estate market analysis, utility service plan, and capital improvement program have also been prepared and are available as separate documents.

Context

Berkeley Township can be viewed as three distinct areas – The Pinelands and senior communities, which lie west of the Garden State Parkway; the "eastern mainland," which stretches from the Parkway to the shores of Barnegat Bay; and the barrier island. The future of the Township west of the Parkway is, for all intents and purposes, established for the foreseeable future (by the Pinelands Comprehensive Management Plan and existing adult/senior communities of Holiday City and Silver Ridge). The future of the barrier island is likewise established by the presence of the South Seaside Park section of Berkeley, an older built-out seasonal community, and Island Beach State Park.

The future of the Township between the Parkway and the bay is not so certain. The eastern mainland consists of neighborhoods such as Bayville, Berkeley Shores, Holly Lake Park and Pinewald with long-established development patterns and available infrastructure. Paralleling the Parkway is the Route 9 corridor, the Township's primary business, retail and commercial area. Along the bay front are large tracts of wetlands and open space interspersed with existing residential developments. The eastern mainland contains the bulk of the vacant developable land in the Township and as such is the primary focus of future development and redevelopment proposals. It is the Township's intention to be proactive about the future of the eastern mainland and to reverse undesirable land use trends through the identification of a preferred future for the year 2020, and the adoption of policies that promote that vision.

In 2002-2003, Berkeley Township conducted a public visioning process to identify long-range goals for the Township's physical, recreational, business, and community development particularly within the eastern mainland section of the Township. The visioning process focused on determining areas for development and conservation, the desired and appropriate locations and intensities of land uses, and community design.

The visioning effort began with the formation of a Steering Committee and preparation of a Municipal Profile in September of 2002. The Municipal Profile described baseline conditions in the Township and Eastern Mainland and outlined possible build-out trends if no adjustments were made to the Zone Plan in place at the time. The Profile was used as a tool at several public workshops hosted by the Steering Committee and spanning the next twelve months. Public reaction to the "trend" build-out was decidedly negative, with concern expressed over congestion and a lowering of the overall quality of life in the Township if the projected growth occurred.

There was consensus that overall growth potential should be reduced through downzoning and that the Township should advocate for legislative change that would enable a mechanism such as Transfer of Development Rights to preserve lands with environmental value from development, while revitalizing underutilized and run down properties along the Route 9 corridor.

The process resulted in a 2020 Vision Statement – a guide for the Township's long-term policy and planning initiatives. The vision statement departs from trend by establishing four primary targets for future development – Town Center and three commercial nodes – while preserving a substantial portion of the Township as open land. By contrast, the trend scenario would continue to disperse growth throughout the eastern mainland while consuming most of the remaining open lands. In summary, implementation of the Vision Statement would:

- Retrofit existing strip-type development along the Route 9 corridor into concentrated, mixed-use alternatives;
- Promote in-fill development and efficient use of existing infrastructure;
- Promote a well designed town center as the focus of the Township's growth;

- Preserve environmentally sensitive coastal and undeveloped forest resources;
- Maximize circulation and mobility options; and
- Maximize housing opportunities.

When the TDR Act became law in March of 2004 (roughly one year after the 2020 Vision Statement was adopted by the Township), Berkeley became one of the pilot communities using funding from the State Transfer of Development Rights Bank and the Office of Smart Growth (OSG) to begin planning for a TDR program in 2005. The Visioning Steering Committee became the TDR Steering Committee and the Township engaged in the Plan Endorsement process with OSG.

When the Plan Endorsement Guidelines were amended in October of 2007, the Township re-engaged in the Plan Endorsement Process after an 18 month period during which the issues linking the proposed Town Center, the initial Receiving Area, with the planning, design and construction of Western Boulevard Extension by Ocean County through the New Jersey Pulverizing sand quarry. The road, long considered to be a prerequisite to the redevelopment of the Beachwood Mall redevelopment area at the Town Center due to traffic capacity limitations on Route 9, was opposed by environmental groups because the sand quarry had naturalized and become habitat for threatened and endangered plant and animal species in the path of the proposed alignment.

In 2009, Berkeley adopted a joint land use and circulation master plan element that complement and support the development transfer plan element. Working concurrently with the OSG and its agency partners on Plan Endorsement, the Land Use and Circulation Element revised the Sending Areas and expanded the Receiving Areas as part of the Future Land Use Plan. A solution to the impasse on Western Boulevard Extension was found when the State proposed that the Town Center be divided into two phases, with immediate designation of the first phase of the initial center through Plan Endorsement and the designation of the second phase linked to the new road.

In September of 2009, the Township's Action Plan for Plan Endorsement was approved by the State Planning Commission, with the principal remaining Action Items being the completion and adoption of the TDR documents and the finalization of the Township's component of the Ocean County Water Quality Management Plan.

The Township's TDR Program has become a critical lynchpin of the Township's Smart Growth planning efforts, as it provides a powerful incentive for the hundreds of owners of thousands of tiny "newspaper subscription" lots in forested areas of Pinewald to sell their development rights and preserve those areas from development. These preserved areas also create greenways that span Route 9 in some locations, thereby framing the "Corridor Nodes" and breaking up the traditional strip commercial land use pattern that has made the corridor congested and dangerous. At the same time, the existing property owners within the secondary Town Center (TC-2) and the Light Industrial Node will be motivated by their recognition as a CAFRA center and node to buy development credits and either expand or completely redevelop in a planned, consolidated fashion that

minimizes turning movements on Route 9, provides pedestrian crossings and safety improvements, and reduces vehicle trips through the mixing of uses. Eventually, developers will be attracted to Node C and Phase 2 of the Berkeley Town Center and will also be motivated by density bonuses to develop those existing underutilized properties in the same planned fashion through the purchase of development credits.

I. Population and Economic Growth

The 2000 Berkeley Township population of 39,990 persons was nearly a ten-fold increase over the 1960 population of 4,272 persons (see Figure II-1). The decennial population growth rates were extremely high between 1960 and 1990 with the population almost tripling during the 1970s with an increase of nearly 200% (see Figure II-2). This is also when the majority of the senior communities were constructed. In 2000, the Eastern Mainland portion of the Township accounted for 44% of the total population in Berkeley with 17,631 persons, up from 40% in 1990.

Figure I-1
Population Growth 1900 – 2000 – Berkeley Township

Source: US Census

Figure I-2
Population Growth Rates – Berkeley Township 1960 – 2000

Source: US Census

The overall population growth rate in Berkeley dropped considerably to only 7.2% during the 1990's. This slow growth rate was less than half that experienced in neighboring Lacey and Dover townships. The Eastern Mainland, on the other hand, experienced a population growth rate (16.9%) that was more consistent with Dover (now Toms River) Township (17.5%) and Ocean County (17.9%), notably contrary to the slow growth in Berkeley Township overall. (See Figure II-3)

Figure I-3
Comparative Population Growth Rates – 1990 to 2000

Source: US Census

The US Census 2009 population estimate for Berkeley is 42,975, an increase of over 2,500 people from 2000, a rate of growth of 6.5%, which is only slightly lower than the growth rate experienced between 1990 and 2000.

The North Jersey Transportation Planning Authority (NJTPA) issued population, housing, and employment projections on March 14, 2005. As reported by NJTPA, the number of residents in Berkeley is expected to increase from 45,680 in 2005 (notably higher than the Census 2009 estimate) to 57,440 in 2030; the number of households is expected to increase from 21,120 households in 2005 to 27,150 households in 2030; and the number of jobs in the Township projected to increase from 5,540 jobs in 2005 to 7,480 jobs in 2030 (see Table II-1). With few opportunities for development west of the Parkway and on the barrier island, the Eastern Mainland is presumably where the majority of Township's growth would be accommodated.

Table I-1
NJTPA Projections – Berkeley Township

	US Census	NJTPA					
	2000	2005	2010	2015	2020	2025	2030
Population	39,990	45,680	46,870	48,630	51,240	54,340	57,440
Households	19,830	21,120	21,800	22,780	24,190	25,740	27,150
Jobs	5,310	5,540	5,880	6,180	6,480	6,800	7,480

A build-out analysis was recently conducted for the Township's land use element. In order to arrive at a reasonable estimation of the amount of land that is available for development, the Township's land area was categorized as either "unconstrained vacant" or "developed and/or constrained." Land that is considered vacant and unconstrained includes privately owned unimproved sites that are generally unconstrained by critical natural features. Developed and constrained lands include developed areas, preserved open-space, parks and recreation areas, and wetlands and 100-year flood hazard areas.

Approximately 2,200 acres or 9% of the Township's total parcel acreage is considered vacant and unconstrained and potentially available for development (see Figure I-4). Of the 2,200 acres, 690 acres, of which about 661 acres are taken up by only seven (7) parcels, are located in the Pinelands and around 1,500 acres are located in the Eastern Mainland. The barrier island (South Seaside Park) does not indicate any privately owned parcels large enough to be shown on the map. Several of the largest tracts in the Pinelands are adjacent to the Holiday City and associated retirement communities on Mule Road and are not likely to be developed. Given the majority of unconstrained vacant land is located in the Eastern Mainland where Pinelands restrictions are not applicable, it was determined early on the TDR process that the Sending Areas should be in the portion of Pinewald that is in the CAFRA zone (east of the Garden State Parkway).

Figure I-4: Map of unconstrained Vacant Land, taken from the 2008 Land Use and Circulation Plan Element, adopted in March of 2009 into the Berkeley Township Master Plan.

Development potential was calculated by applying current zoning categories to all unconstrained vacant land and calculating the resulting build-out. The exception is the Town Center Zone where a pre-set number of dwelling units and commercial square footage was assigned and added to the dwelling unit and commercial space build-out calculated for the other zones in the Township.

Of the Township's 2,200 acres of vacant and unconstrained land approximately 1,900 acres is residentially zoned. Based on current zoning this land would yield approximately 2,800 additional dwelling units. By applying the 2000 Census Township-wide figure of 1.99 persons per occupied dwelling unit, the potential exists for 6,553 additional residents at build-out, or a total population of approximately 49,000. In 2000, there were 2.8 persons per occupied dwelling unit in the Eastern mainland portion of the Township. When that number is applied to the number of additional dwelling units, the potential exists for an additional 9,220 residents in Berkeley, or a total population of approximately 52,000 based on the "trend growth scenario". Both of these results fall below the NJTPA long-range projections. This trend growth scenario does not include residential development estimated to be generated from Phase 1 of the Berkeley Town Center (approximately 70 units of a wide variety of housing types), because redevelopment of Town Center cannot advance without the changes in NJDEP lot coverage restrictions that would result from the completion of Plan Endorsement, which, in turn, is predicated on the completion of the TDR Program.

The TDR Program, which when coupled with Plan Endorsement is considered the "preferred growth scenario", is not intended to dramatically alter buildout, but rather shift the equivalent of 408 single family detached dwelling units on large lots (quarter acre to three acre) and 96,938 square feet of commercial space (429.71 development credits total) from Pinewald to additional retail space and higher density duplexes, townhouses and apartments in the Receiving Areas along Route 9 and additional industrial space in the Light Industrial Node. To the extent that some of those dwelling units are converted to commercial or industrial floor space, however, the population projections can be expected to be reduced.

Nonresidential build-out was measured in terms of additional gross floor area and was calculated using Floor Area Ratio (FAR). Approximately 308 acres of unconstrained vacant land are zoned for commercial/industrial uses throughout the Township. This number excludes the more than 500 acres of the two parcels of the New Jersey Pulverizing Site that are listed as "4B" (industrial) rather than "1" (vacant). Figure I-5 below gives a detailed breakdown of the NJ Pulverizing Site, which is the largest privately owned contiguous tract in Berkeley Township. The site was proposed as a possible Sending Area in the 2008 Land Use and Circulation Element, but it soon became evident during the development of the REMA that the Township would not have sufficient capacity in its Receiving Areas to take the additional development credits that a tract of this size would generate. It is anticipated that the lack of road access will relegate the use of the tract to continued mining, although the Township has been investigating ways of securing the land as open space.

Without the two parcels (500 acres) of NJ Pulverizing Property that are not considered vacant because they host buildings and improvements associated with the pulverizing plan, the build-out analysis, based purely upon full build out under zoning of unconstrained vacant land zoned for business or industry, indicates a potential for slightly more than 11 million square feet of additional nonresidential floor area in Berkeley. However, the vast majority of that available land is the remaining 337 acres of the New Jersey Pulverizing sand pit and there is no road access to that industrially zoned land presently and the Township and County plan to design the future Western Boulevard Extension through the property as a limited access road, as well as to limit or prevent entirely any more intensive industrial development of the site in the future. Full build-out of the Berkeley Town Center Zone has the potential to add approximately 550,000 square feet of nonresidential floor area, but only if the CAFRA lot coverage restraints are relaxed through Plan Endorsement and TDR. The actual nonresidential buildout of the Berkeley Town Center will depend on the real estate market and the market absorption of that much commercial space can be expected to take years. It is the economic balance of residential growth needed to support new commercial development that makes it essential to focus on mixed-use development in the Receiving Areas in order for the TDR Program to be successful.

Figure I-5: Map and table showing breakdown of NJ Pulverizing Site. Site photos below show nature of industrial use and expansive open space potential, inclusive of several surface water features.

II. Sending and Receiving Areas

Berkeley has established five sending zones and four Receiving Areas (two town centers, a "CAFRA" Industrial Node and one corridor node) as outlined in Tables II-1 and II-2. The tables reflect total acreage in both the Sending and Receiving Areas, but not all properties in the Sending Areas are vacant and will generate development credits. In addition, some properties within the Receiving Areas are already developed will not be receiving development credits, but are included because they are part of areas with undeveloped land.

All of the zones are located in the eastern mainland portion of the Township as illustrated in Map 1 at the end of this section. The specific tax block and lot information for each zone is provided in the appendix.

Table II-1
TDR Sending Zones

Sending Area	Total Acres	Current Zoning
AA	348	R-150, R-400 & RHB
A	88	CR, R-150 & R-400
B	163	R-150
C	71	R-150
D	170	R-150 & R-400
	840*	
	*Includes parcels in both public and private ownership	

Table II-2
TDR Receiving Areas

Receiving Area	Total Acres	Current Zoning	Proposed Zoning

Town Center 2	92	R-200, R-MF & HB,	**Town Center 2 Overlay District**
Node C	146	CR, R-200, R-400 & CR	**Corridor Node Overlay District**
Industrial Node	79	Light Industrial	**Light Industrial**
	760		

Sending Areas

The five sending areas are located in an area of the Township generally bounded by the Garden State Parkway to the west, Route 9 to the east, Lacey Township to the south, and Beachwood Borough to the north. This section of Berkeley Township is developed primarily with scattered low-density single-family homes and includes institutional uses

such as the High School and OCUA Wastewater Treatment Plant, and a large sand quarry (see Map 2). Five sending areas – AA through D – are generally large tracts of undeveloped, residentially zoned land that are largely forested and not served by roads or public water or sewer infrastructure. These areas consist of approximately 5,000 small tax lots and paper streets as a result of early 1900's subdivisions that were never developed. When taken together the five sending areas encompass approximately 840 acres of forested and open lands that include Threatened Forest Habitat/Rank 3 and wetlands (see Maps 3 and 4). These remaining undeveloped lands are comparable to forested lands regulated as part of the Pinelands Management Area and in many cases only the Garden State Parkway separates them. In other cases these undeveloped forested lands reach Route 9 and form a "greenway" with undeveloped and mostly preserved upland forest and marshlands to the east of Route 9 that, in some cases, extend to the Barnegat Bay (see Maps 2, 4 and 5).

Among the approximately 5,000 tax lots that comprise the 840 acres in the five Sending Areas are 1,973 tax lots that are privately owned that total 239.7 acres. Those 1,973 tax lots translate into 333 groupings of lots which, in turn result in an allocation of 429.71 development credits based on existing zoning within the Sending Areas. The Table of Sending Area groupings of lots by private property owner from Table 1 of the REMA can be found in Appendix 1.0 of this TDR Element.

The balance of the tax lots in the Sending Areas are already owned by the Township. As it became evident through the development of the REMA that inclusion of the Township lots would generate more development credits than the Receiving Areas could absorb, it was determined that the Sending Areas would be adjusted to enable consolidation of public and private lots into contiguous forested areas that would be preserved from development through a combination of public ownership of lots and paper streets and private lots deed-restricted from development through the sale of their development credit (compare Figure 0-2 with Map 7). For that reason it was critical to the success of the program that every single privately owned lot have some transferable value (credit or fraction of a credit).

The Township's 2008 Land Use and Circulation Element has clearly defined the limits of future infrastructure extensions in this part of the Township thereby differentiating those areas that can reasonably be expected to be supported by public infrastructure and therefore built-out; and those that are more suitable for conservation through the TDR program - the sending areas (see Future Sewer Service Area Map in Figure II-1). The land use element designates sending areas AA through D as Conservation Residential Districts. However, during the development of the Real Estate Market Analysis, it became evident that the TDR program, as applied in Berkeley's situation, would be most effective if the sending areas were not down-zoned to Conservation Residential (3 acre lots) so as to maintain the market value of the sending credits. This position received unanimous support at the TDR meeting with the sending zone property owners held on March 29, 2010, including several local builders who had previously vigorously opposed

TDR during the hearings on the 2008 Land Use and Circulation Element because of the downzoning.

Figure II-1: Proposed Future Sewer Service Areas - Ocean County Water Quality Management Plan Draft, May 2012

For many other property owners who contacted the Township Planner individually after the TDR meeting, the primary sentiment expressed was one of intense interest, as their lot(s) were in most cases inherited from relatives and were believed to have little or no value because they were severely undersized or remotely situated from any improved roads. The TDR program was widely embraced as a solution to providing equity to the private lot owners while preventing continued scattered development in the forested areas. For the Township, the TDR Program provided an alternative to using Open Space fund money to try to acquire the privately owned lots.

Parcels eligible for the density transfer option must be located within an approved sending zone and must not be deed restricted from further subdivision or further development. Additional eligibility criteria are presented in the Procedures for Conveying Development Potential section of this chapter.

An aerial view of each sending zone is provided in Maps 5 through 9.

Receiving Areas

The Township has identified two Town Centers, an industrial (CAFRA) node and one corridor node to serve as Receiving Areas. These four Receiving Areas include 244 parcels on 244.2 acres. As seen on Map 1, the Receiving Areas are located at strategic points along the Route 9 corridor. Each of the areas is developed to a lesser or greater degree with residential, commercial, and/or industrial uses (see Map 2). The most northerly zone (Berkeley Town Center) and the most southerly zone (Corridor Node C) are impacted by threatened forest habitat (see Map 3). All of the areas are within the OCUA sewer service area and will remain in sewer service areas as shown in Figure II-1. They are also in either the Aqua New Jersey or Berkeley MUA water service areas and have the potential for either infill development or comprehensive redevelopment. Parcels eligible for additional density through the TDR program must be located within one of these Receiving Areas. The complete list properties within the Receiving Areas can be found in Appendix 2.0, as taken from Table 2 of the REMA.

Berkeley Town Center – Phase 2

Berkeley Town Center, the northernmost and largest receiving zone, covers 443 acres immediately south of the Beachwood Borough border, north of Mill Creek, west of Route 9 and east of the Central Rail Road of New Jersey right-of-way. The area is currently comprised of the Beachwood Plaza - an obsolete shopping center built in the 1950's, the former South Brunswick Asphalt facility, random retail service uses, an outdoor commercial recreation facility and a salvage yard. Wetlands have been identified along the Mill Creek section of the site (see Map 4).

The concept for Berkeley Town Center – a compact, mixed-use, human-scaled community - was conceived as part of the Berkeley visioning process in 2002-2003. The Township has taken several proactive steps since then to bring the Town Center to fruition. The Township Council designated the majority of the proposed Town Center as an "area in need of redevelopment" in June of 2003. In 2006, the Township adopted the Town Center Zoning District, which consists of six sub-districts including Mixed Use, Small Scale Commercial, Core Commercial, Residential, Open Space Parks and Recreation, and Environmentally Sensitive. In August of 2009, the Township adopted the Berkeley Town Center Redevelopment Plan to guide the comprehensive redevelopment of the site. If fully realized, the combined build out of Phase 1 and Phase 2 of the redevelopment plan has the potential to yield approximately 700 dwelling units and 550,000 square feet of commercial space. Within the Phase 2 portion of the Town Center, 12 parcels in four ownerships would be eligible to purchase TDR credits to increase density. These 12 parcels total 115.31 acres of land, but increased density would be permitted on only 78.44 acres. TDR credits would provide for an increase in density from 20 dus/acre to 30 dus/acre on 75.68 acres and from 10 dus/acre to 15 dus/acre on 2.76 acres. This would result in the development of an additional 769 residential units—756 high density units (multi-family) and 13 units at medium density (live-work), as well as 422 units "by right". In addition to the "by right" residential component within the remainder of the Phase 2 area, it is anticipated that additional commercial retail space of approximately 50,000 square feet would be incorporated within the street-level portions of mixed-use buildings fronting on Gladney Avenue or the immediate side streets per the Concept Plan (see Map 10 and Figure VI-1).

Accommodating planned growth within the Town Center will require the extension of Western Boulevard to serve the rear of the site so that anticipated traffic volumes do not add to the already overburdened Route 9 corridor. With extension of this County road several years off, the OSG and its agency partners devised a solution whereby the Town Center would be divided into two phases with Phase 1 receiving immediate center designation, subject to off-tract traffic improvements and designation of Phase 2 linked to the new road.

As the REMA was being developed it became evident that the extraordinary costs associated with the first phase of the Town Center (extensive brownfield remediation and settlement of NJDEP penalties from the prior owner, rerouting of through traffic from Berkeley Avenue onto a new road to be constructed within the redevelopment project, widening of Route 9, relocation of a traffic signal, redesign of stormwater management facilities to serve both the project and to replace the current basin on the site that handles all of Beachwood Borough, and incorporation of affordable housing) made the imposition of purchase of TDR credits impractical for the first phase. In essence, the maximum feasible development intensity was needed for the first phase to cover all of the extreme infrastructure and site clean-up and preparation costs. Requiring credit purchase would have made the project financially infeasible. It was determined however that Phase 2 of the Berkeley Town Center could serve as a TDR Receiving Area.

The Town Center Ordinance will remain in place for the few existing residential and commercial properties within Berkeley Town Center, while the Berkeley Town Center Redevelopment Plan now regulates the vast majority of the area designated as a redevelopment area. New zoning standards have been developed for Town Center 2 and Node C to ensure that smart growth principles are applied in each case.

Town Center 2 (Secondary Town Center)

The second proposed Town Center straddles Route 9 from its intersection with Korman Road and Ocean Gate Drive, south to Bow Street. This center is smaller than Berkeley Town Center, consisting of 92 acres. The goal is to forge a strong pedestrian link between the high density residential development on the west side of Route 9 with the commercial area anchored by the Shop Rite supermarket on the east side of Route 9 while promoting better quality design and landscaping, shared parking, and more controlled access to Route 9.

Transfer of Development Rights will be accommodated in the 30.75 acre portion of the center east of Route 9 which is comprised of 6 parcels in common ownership. With the introduction of a simple street grid, this underdeveloped shopping center has the potential to add 158 dwelling units (12 duplexes, 46 townhomes and 100 multifamily), an additional 140,000 square feet of retail and 10,000 square feet of additional restaurant space in the form of infill development. All of this anticipated development would be achieved only through the purchase of TDR credits.

Currently the entire Town Center 2 is fully developed under current CAFRA restrictions on impervious surface and HB zoning. Once Town Center 2 is recognized by as a "CAFRA Center" and a State Plan Town Center via Plan Endorsement, the allowable impervious surface coverage may increase from 30% to 70% enabling zoning changes to be implemented. (see Draft Zoning Amendments for the Town Center 2 Overlay District in the Appendix of this document).

Node C

Corridor Node C is the southernmost receiving area covering 95.47 acres on 22 parcels. Located primarily on the southbound side of Route 9 in the vicinity of Harbor Inn Road, this receiving zone has the most potential for new development and redevelopment after Berkeley Town Center. It is currently sparsely developed with the predominate use being an abandoned mining operation. A concept plan has been developed for this node to ensure that its development conforms to smart growth principles. This zone has the potential to become a mixed-use "Southern Village" adjacent to Dudley Park and the Barnegat Branch Trail bike path being developed by Ocean County.

Based on existing zoning, the build-out of Node C would approximate 114 single-family residential units (5 units on 3 acre lots in the Conservation Residential Zone; 61 units on 40,000 square foot lots in the R-400 Zone; 26 units on 20,000 square foot lots in the R-200

Zone; and 22 units on 15,000 square foot lots in the R-150 Zone) and 147,000 square feet of commercial space. The build-out under the Corridor Node Overlay District regulations would permit an estimated 616 duplexes, townhouses and multi-family dwelling units, and 147,000 square feet of commercial space within the same developable land area. The REMA analysis estimates the added value between the 114 single family homes under existing build-out and the 616 duplexes townhouses, and multi-family dwelling units in the Overlay District contingent upon the purchase of Development Credits.[1] The TDR Ordinance adopted by the Township will incorporate a credit equivalency ratio for multi-family units.

Bird's eye view of Industrial Node – currently developed at 30% maximum impervious surface coverage under CAFRA regulations.

Light Industrial Node

The Light Industrial Node is located at the western end of Hickory Lane in Berkeley Township's Suburban Planning Area. This 79.3 acre area is generally bounded by the rail right-of-way to the west, the extent of Block 858 lot 46 to the north, Keefe Street to the east, and Northern Boulevard to the south. The node includes industrial properties and borders the OCUA across the Rail right-of-way. It is composed of 241 parcels with 11 owners and existing commercial space totaling 127,394 square feet. The following properties, listed by block and lot are proposed for inclusion in the industrial node.

Table II-3 List of Properties in Light Industrial Node

Block	Lot(s)
610	31
611	1-32, 33.01, 34, 36, 38.01
612	1

The State Plan sets forth guidelines for heavy industrial and commercial/ light industrial node designations. The Industrial node proposed below is considered a Commercial/Light Industrial Node.

[1] Real Estate Market Analysis, Urban Partners, August 20, 2010, page 10.

The entire Hickory Lane Industrial Park is fully developed under current CAFRA restrictions and existing LI zoning. Once the Light Industrial Node is recognized as a "CAFRA Node" and a State Plan Node via Plan Endorsement, the impervious surface coverage may increase from 30% to 80%. The Light Industrial Zone regulations however will be amended to limit the maximum impervious surface coverage to 70%.

With the purchase of Development Credits, property owners will be able to capture the development potential opportunities the increase in impervious surface provides. In total an additional 260,000 square feet of commercial space is possible through TDR. Development may occur at a density of 0.15 FAR with one credit required for each additional 18,000 square feet. Table II-4 below, which includes Table 16 from the REMA, summarizes the estimated development by Receiving Area that will be attributed to the purchase of Development Credits and the analysis of affordability of the Credits.

Table 16
Development Credit Bonus & Affordability
Receiving Zone

Receiving Area	Development Type	Development Credit Shortfall	Development Credit Bonus Ratio	Bonus Development Credits	Development Credits Needed From Sending Zone	Sending Zone Development Credit Cost	Available For Development Credit Purchase	Funds Available For Credit Purchase As Percentage of Credit Cost
Town Center 1	Multi-Family (756)	756	3.10	572	184	$11,985,366	$13,230,000	110.38%
Phase II	Live-Work (13)	13	0.80	6	7	$469,444	$520,000	110.77%

III. Accommodation of Anticipated Population Growth

Although the rate of growth has slowed considerably since 1990 compared to preceding decades, the North Jersey Transportation Planning Authority (NJTPA) still projects Berkeley to add more than 10,000 new residents by the year 2030. The build-out analysis prepared as part of Berkeley's 2008 land use element projects a lower level of growth –somewhere between 6,500 and 9,200 new residents at full build-out.

Both of those projections are primarily based on a trend scenario, that is, continued development without any focused attempt by the Township to alter trend in favor of a more preferred growth scenario. As noted before, Berkeley has already articulated its vision for the future development of the Township, which is to guide growth to well-planned compact centers and nodes and away from lands that are more suitable for preservation.

In any case, available suitable land to accommodate residential growth within the Township is limited due to environmental constraints, the Pinelands Comprehensive Management Plan, the Wetlands Act of 1970 and the Coastal Zone Management Rules established by the Coastal Area Facilities Review Act (CAFRA). The area of the Township known as Pinewald, between the Garden State Parkway and Route 9, is the main locale of undeveloped land that can accommodate new residential growth in significant numbers. However, these areas do not have ready access to roads, public water or sanitary sewers.

It is the Township's intention, through a variety of mechanisms, to preserve more than 840 acres of undeveloped residentially zoned land in the five Sending Areas and the 837 acres of industrially zoned land owned by NJ Pulverizing (see Figure I-5) that currently lacks the necessary sewer, water and roadway infrastructure needed to accommodate future growth. Through the TDR program, the equivalent of 391 single family detached dwelling units and 97,121 square feet of commercial space (429.71 development credits total) would be transferred from the five Sending Areas to the four Receiving Areas, which together have existing or planned infrastructure capacity to accommodate approximately 1,543 dwelling units, 260,000 square feet of light industrial development and 150,000 square feet of commercial development in addition to the 1,540 residential units and 147,000 square feet of commercial development that would be permitted "by right" in the Receiving Areas if the regulatory changes resulting from the completion of Plan Endorsement (and TDR) were successfully implemented.[2]

[2] Real Estate Market Analysis, Urban Partners, November 16, 2012, page 3.

The shift from conventional three to five bedroom single family units on quarter acre to three acre lots to predominantly two or three bedroom duplexes, attached townhomes and apartments is also aligned with the anticipated changes in future demand for housing. The next significant demographic age group (the "Millennials" – born between 1982 and 2002 and estimated to be even greater in numbers than the "Boomers"[3]) is reaching child-bearing age. However, this latest group of young adults is expected to desire more socially conscious, meaningful (but lower income) employment than their parents. That demographic profile generally will desire a more affordable urban, social-cultural lifestyle with a greater percentage opting out of or delaying parenthood for either social or economic reasons, thereby causing smaller household sizes. That means fewer families with children living in suburban "sprawl" environments in the future, and potentially a gradual decline in student enrollment as the current student population passes through high school with fewer students coming into the system to replace them. In Berkeley's case, the massive construction of retirement communities in the 1970s and 1980s created a population with an average age in the "active adult" range to start with, so the shift in buildout to a higher density, more affordable housing type, combined with the projected increase in young childless households, suggests that enrollment will actually decline and classroom sizes will shrink even with the increase in population and employment that occurs in the Receiving Areas.

IV. Receiving Zone Infrastructure Analysis

This section provides an overview of the infrastructure available to service the Receiving Areas. Additional information and cost estimates are provided in the utility service plan and capital improvement program – a separate document.

Potable Water

Berkeley Town Center, Town Center 2 and the portion of the Industrial Node north of Hickory Lane fall within the service area of Aqua New Jersey (formerly the Berkeley Water Company), a private water franchise (See Figure IV-1 shown below). While Aqua owns a well that serves the "Belair" neighborhood on the east side of Route 9 opposite Node C, the land within Node C itself is within the service area of the Berkeley Township Municipal Utilities Authority, as is the portion of the Light Industrial Node south of Hickory Lane. [4]

Figure IV-1: Water Service Areas – Eastern Mainland

[4] Verified in a phone conversation with James C. Barbato, PE of Aqua NJ Water Company on October 19, 2010

According to NJDEP records, Aqua has an allocated water supply limit of 48 million gallons per month (mgm), and a peak demand of 39.265 mgm, leaving an overall surplus of 5.805 mgm. Aqua has indicated that a new well would have to be provided by the eventual redeveloper to adequately service Berkeley Town Center. Water lines presently exist in the Route 9, Gladney Avenue, and Locker Street rights-of-way. These lines would have to be upgraded and extended to service the town center.

According to Berkeley Township's Township Engineer, water is provided to the retirement communities of Holiday City and Silver Ridge, as well as the Manitou Park Rehabilitation Area by United Water Co;, the Northern one-third of Bayville by the Aqua Water Co.; South Seaside Park by the Shore Water Co.; the southern one-third of Bayville by the Berkeley Township Municipal Utilities Authority (BTMUA) . All named water companies with the exception of the BTMUA are separate privately owned operations.

Water Sources

According to the Berkeley Township Municipal Utilities Authority (BTMUA), many residents and businesses in the portion of Bayville east of Route 9 obtain water from privately operated wells on individual lots. However, the BTMUA issued a Water Distribution Map (April 2011), which shows infrastructure in most developed areas east of the Parkway (see Figure IV-2). This map shows that public water lines now serve many of the neighborhoods in the BTMUA's service area in Pinewald and Bayville.

The BTMUA's Water Supply Master Plan estimates saturation development in the MUA's service area to be approximately 7,800 units (existing and new). This estimate does not include any development in wetland areas shown on United States Geological Survey maps (USGS). During the spring of 1993, the Phase I of the Authority's water system, serving 2,800 of the 7,800 projected units, reached its final stages of construction and was placed into operation. Upon receipt of a 1.2 million dollar loan and $500,000 grant from the U.S. Department of Agriculture from a grant program initiated by the USDA in 2000 (Water Project 2000), the Authority's system was expanded significantly between 2005 and 2008, mostly in the Pinewald area west of Route 9, with approximately 77,000 linear feet of additional 6.8 and 12-inch diameter water mains installed. These new water lines were installed along streets in Pinewald to reach existing homes with on-site wells and to connect newly constructed homes on existing scattered lots too small for on-site wells.

The TDR Program will reduce the further build-out of Phase II of the system and confine it to areas of Pinewald that are already developed, as no extensions of water or sewer lines will be made into the Sending Areas, which will become Planning Area 5 through the Plan Endorsement Process. The water capacity originally projected for the areas of Pinewald now to be preserved through TDR will be available for the build-out of Node C.

The following table shows the Public Community Water Supply wells within Berkeley Township.

Figure IV-2: BTMUA Water Distribution Map

Supply Capacity

There are five Public Water Supply Systems providing service to the eastern mainland portion of the Township (where the sending and receiving areas are located) at a rate of approximately 23.917 million gallons per day (MGD) at peak demand, as shown in the table below. According to the Department of Environmental Protection, Division of Water Supply, the Firm Capacity means adequate pumping equipment and/or treatment capacity to meet peak daily demand, when the largest pumping station or treatment unit is out of service.

Table 2
Level of Service for Public Water Systems

PWSID	Public Water System / Purveyor	Population Served[5]	Firm Capacity (MGD)	Supply Allocation Limit (MGD)	Total Peak Demand (MGD)	Firm Capacity Deficit/Surplus (MGD)

[5] Source: Office of Smart Growth letter to Berkeley Township, June 17, 2009

The Berkeley Town Center, Town Center 2 and the portion of the Light Industrial Node north of Hickory Lane are located within the Aqua NJ franchise area. It is anticipated that Phase 1 of Berkeley Town Center will develop as a mixed-use core "Main Street" area bordered by three large regional retail buildings and a movie theatre worked into the Center through the use of "liner buildings" to mask the side facades. It is proposed to include 450,000 square feet of retail and restaurant uses, 50,000 square feet of general office use and 70 residential units. The combination of these uses would generate an estimated 58,785 GPD, assuming that the 70 units of Phase 1 will be either townhouses or multifamily/mixed use housing types.

Within the Phase 2 portion of the Town Center, TDR would result in the development of an additional 212 residential units—150 high density units (townhomes or condominiums) and 62 units at medium density (duplexes), as well as 422 units "by right". In addition to the "by right" residential component within the remainder of the Phase 2 area, it is anticipated that development of approximately 50,000 square feet of small, service oriented businesses on the street level of mixed-use buildings near Route 9 will occur as the Town Center transitions from the "Main Street Core" of Phase 1 to the medium density "edge" and the lower density, small lot single family "fringe" areas of Phase 2. This retail space would be incorporated within the street-level portions of mixed-use buildings fronting on Gladney Avenue or the immediate side streets.

The estimated build-out of Phase 2 of the Berkeley Town Center is shown in the following table:

Residential	
Unit Type	**Number of Units**
Single Family	80
Duplex	94
2 Bedroom TH	175
Multifamily	285
TOTAL	**634**
Commercial	
Type	**Square Feet**
Retail	50,000
Restaurant	0
	50,000

The estimated build-out of the Town Center 2 Receiving Area is shown on the following table:

Residential	
Unit Type	**Number**
Single Family	0
Duplex	12
2 Bedroom TH	46
Multifamily	100
	158
Commercial	
Type	**Square Feet**
Retail	140,000
Restaurant	10,000
	150,000

Aqua NJ has calculated that based on the estimated development in the tables above, the required Firm Capacity to build Berkeley Town Center Phase 2 and the Town Center 2 would be 0.418 MGD. The required Annual Allocation to build Berkeley Town Center Phase 2 and the Town Center 2 would be 51.81MGY. The required Monthly Allocation to build Berkeley Town Center Phase 2 and the Town Center 2 would be 4.317 MGM.

The Light Industrial Node is split between Aqua New Jersey (22 acres north of Hickory Lane) and the Berkeley Township MUA (BTMUA) (57 acres south of Hickory Lane). To complete the analysis regarding water supply capacity within the Aqua NJ Franchise Area, it is necessary to add the demand to be generated by the 22 acres within the Light Industrial Node that is north of Hickory Lane at 0.15 FAR (143,748 square feet). Of the 19,500 GPD generated by the entire Light Industrial Node, 5,391 GPD (0.167 MGM, 2.0 MGY) is attributed to the Aqua NJ Franchise Area (143,748 sf x 0.0375 gallons/sf = 5,390.55 GPD) with the remaining 14,109 GPD being attributed to the BTMUA Franchise Area. Aqua NJ representatives do not anticipate additional wells to handle this estimated demand beyond the wells already being planned for the Town Center and Town Center 2. They expect the developer of an approved subdivision on Hickory Lane to the east of the LI Node to extend a water main from the Sylvan Lake residential community and the future developer the 22 acre portion of the LI Node to the north of Hickory Lane to extend that water main up Hickory to serve the new buildings constructed there. When demand figures for Town Center Phase I and the Light Industrial Node are included the total demand in the Aqua NJ service area would be 74.04 MGY and 6.28 MGM respectively.

A comparison to the capacity numbers in Table 2 shows that this projected demand would create deficits in Firm Capacity, monthly capacity and annual capacity. When the water allocation permit for Aqua's franchise area was last determined in April of 2011, the limits were not necessarily matched across all criteria for all future scenarios. Since Firm Capacity, monthly capacity and annual capacity are lower than needed, an allocation permit application will be needed.

Aqua expects that the new well determined to be necessary to address Phase 1 of the Berkeley Town Center could be designed to also address the additional capacity needed for Phase 2 of the Berkeley Town Center and could be accommodated at the site of their existing well, pump station and water storage tank within the Town Center Redevelopment Area at a rough cost of $250,000 ($150,000 to drill the well and $100,000 for equipment upgrades to the existing pumping station).

Aqua also owns property on Sherman Avenue within the block occupied by the shopping center in Town Center 2 and indicated that they would drill a deeper well on that property to access the additional capacity needed for the anticipated development there. In addition to the estimated $150,000 to drill the well, they estimate an additional $300,000 to build and equip the pump station. Aqua NJ received notice from NJDEP in March of 2010 extending its Aquifer Test Approval period to June 30, 2013. The Aquifer Test Approval will enable Aqua to test the Piney Point aquifer (located deeper than the

current aquifer from which its water is drawn) and to access the water from that aquifer via new deeper wells, subject to approval by NJDEP of water quality. Should Piney Point not yield sufficient capacity, Aqua will consider a Preventive Risk Management approach to insuring water quality from the existing well at their site on Sherman Avenue.

The following chart from the NJDEP Division of Water Supply shows permitted water supply and demand for the Berkeley Township MUA:

Available Water Supply Limits – BTMUA
Source: NJDEP Division of Water Supply, Updated to 6/27/11

Water Supply Firm Capacity: 1.512 MGD

	Allocation	Contract	Total
Monthly Limit	65.000 MGM	N/A MGM	65.000 MGM
Yearly Limit	722.000 MGY	N/A MGY	722.000 MGY

Water Demand

	Current Peak	Date	Committed Peak	Total Peak
Daily Demand	1.129 MGD	07/2010	0.329 MGD	1.458 MGD
Monthly Demand	35.000 MGM	07/2010	5.100 MGM	40.100 MGM
Yearly Demand	263.304 MGY	2010	40.028 MGY	303.332 MGY

Water Supply Deficit or Surplus

Firm Capacity	Water Allocation Permit
0.054 MGD	24.900 MGM
	418.668 MGY

Node C is located totally within the BTMUA service area. The surplus in Firm Capacity in Table 10 below is 0.054 mgd, which translates to 19.71 mgy (0.054 x 365) and 1.64 mgm (19.71/12). Surplus permitted water allocation is 24.9 mgm), and 418.668 mgy, which translates back to 1.147 mgd (418.668/365). Based on this capacity, combined with the corresponding transfer, estimated in the REMA, of 391 dwelling units and 97,121 square feet of commercial space from the Pinewald Sending Areas (all of which are in the BTMUA service area), it is estimated that adequate capacity exists for water supply in the Node C receiving area.

The Light Industrial (CAFRA) Node is estimated to generate an additional 260,000 square feet of warehouse and industrial development at build-out. Based on multiplier of 0.0375 gallons per square foot, the estimated water demand is 9,750 gallons per day. The BTMUA is already serving the existing buildings within the industrial park. When the 22 acres at 0.15 FAR (143,748 square feet) north of Hickory Lane to be served by Aqua is subtracted from the total for the Light Industrial Node, the balance of 116,252 square feet of industrial space would need to be served by the BTMUA. The demand will be 4359.45 gallons per day (0.13 mgm / 1.56 MGY) on top of the demand generated by Node C described earlier (136,520 gpd/4.23 mgm / 50.785 MGY). The combined demand would

increase from 4.23 mgm to 4.36 mgm and be within the total available surplus Firm Capacity of 24.6 mgm (418.668 MGY). Additionally, if the estimated 100,619 gallons per day (3.12 mgm/37.43 mgy) is subtracted based on the water demand being diverted away from the Sending Areas through the transfer of 413 development credits (equivalent of 391 single family homes and 97,121 commercial square feet), the actual estimated demand for water from the BTMUA as a result of the Township's TDR Program would be 1.24 mgm (4.36 – 3.12), or 14.89 mgy (52.32 – 37.43), which would be 3.6% of the BTMUA's Firm Capacity.

Wastewater Collection and Treatment

Sanitary sewer service is provided by the Berkeley Township Sewerage Authority (BTSA). Most areas east of the railroad right-of-way are presently provided with sanitary sewer service, or have reasonable access to sanitary sewer infrastructure. The BTSA also provides wastewater collection service to the senior citizen communities of Holiday City and Silver Ridge Park West, in addition to Bayville and South Seaside Park. Those residents and businesses not served by the BTSA operate septic systems. The BTSA has the capacity to extend sanitary sewer service to developed lots currently served by septic systems (particularly in the Pinewald area), and has been identifying and locating streets and/or individual lots throughout the Eastern mainland that lack sanitary sewer service. Presently the BTSA wastewater collection system consists of approximately 260 miles of gravity sewer interceptors and force mains, and 14 pump stations. Existing sewer lines are in close proximity to all of the Receiving Areas – Route 9, Gladney Avenue, and Locker Street for Berkeley Town Center; Route 9, Korman Road, Cranmer Road, Frederick Drive, and Butler Avenue for Town Center 2; Evernhan Avenue for Node C, and Hickory Lane and Railroad Avenue for the Industrial Node.

All of the Receiving Areas are located in the Ocean County Utility Authority (OCUA) Sewer Service Area. The OCUA operates a regional wastewater reclamation system serving a total of 36 municipalities in Ocean and Monmouth Counties, including Berkeley Township. The OCUA's Central Water Pollution Control Facility, is located to the north of the Pinewald neighborhood. This facility treats a combination of domestic, light industrial and commercial wastewaters, as well as septage generated from within the OCUA service area. The facility has a rated capacity of 32 million gallons per day. The BTSA has a service agreement with OCUA under which OCUA is obligated to annually receive and treat all the wastewater flow from the BTSA.

The OCUA verified sufficient capacity in a letter, dated November 3, 2010, which stated

Figure IV-3: Sewer Service Area Changes per Draft Ocean County WQMP

"Please be advised that as of October 1, 2010, there are 5.407 mgd of remaining treatment capacity at the Central Water Pollution Control Facility. This is based upon flows currently received at this facility and projects approved by this Authority, but not currently connected. Based upon review of the provided Capital Improvement Plan & Utility Service Plan, last revised October 12, 2010, the Authority can accommodate the (proposed project) wastewater demand".

The following capacity information for the Central Water Pollution Control Facility was supplied by the OCUA.

Permitted capacity	32.000 mgd

Actual Flow - 4th quarter 2007	24.716 mgd
Reserved for approved projects	1.877 mgd
Total committed flow	26.593 mgd
Remaining capacity	**5.407 mgd**

Based on a conservative assumption that potable water consumption equals wastewater treatment, it is anticipated that at full build-out, the wastewater demand generated by both phases of the proposed development of the Berkeley Town Center would amount to 57 MGY (4.75 MGM / 0.153 MGD). Based on a surplus capacity of 5.407 MGD (167.617 MGM / 2011.404 MGY) at the Central Water Pollution Control Facility, there appears to be sufficient capacity for the Town Center project. It should also be noted here that the design standards and zoning requirements for the Town Center 2 and Node C will prohibit the use of potable water for irrigation purposes consistent with sustainable development and Green Building standards. Any water used for irrigation will be required to use only nonpotable sources of water (captured rainwater, recycled graywater, etc).

Likewise, the Town Center 2 projected water consumption of 13.18 mgy (1.098 MGM / 36,113 GPD), if directly translated into wastewater flow, would be easily absorbed within the 5.407 MGD (167.617 MGM / 2011.404 MGY) surplus capacity of the Central Water Pollution Control Facility. Existing sewer lines already serve the Berkeley Plaza (Shop Rite) shopping center and the highest density residential development in Berkeley Township already exists along Frederick Drive and elsewhere within the Town Center, so the additional development as part of this Receiving Area will be infill (consistent with LEED-ND prerequisites for sustainable neighborhood development).

For Node C, the proposed Receiving Area development (616 single family homes in the R400 and Conservation Residential zones and 147,000 square feet of commercial space) creates a demand of 50.785 MGY (4.232 MGM / 136,520 GPD), based on water consumption. This again is easily accommodated within the 5.407 MGD (167.617 MGM / 2011.404 MGY) surplus capacity of the Central Water Pollution Control Facility at the OCUA. Sewer lines currently exist along Route 9 along the easterly edge of Node C and immediately to the west of the Barnegat Branch Trail right of way along the westerly edge of Node C. The existing Cedar Creek Campground, which is part of Node C, is already connected from Harbor Inn Road. Applying the single family water consumption multiplier to the 114 single family residential units (114 units x 3.10 persons per unit x 232.5 gallons per person =82,165.5 GPD) and the commercial multiplier to the commercial floor space generated under the baseline buildout (147,000 square feet x 0.1 gallons per square foot =14,700 GPD) generates a baseline water/wastewater demand of 96,865 GPD (82,165.+ 14,700). Therefore the differential attributed to the transfer of TDR credits is 39,655 gpd (136,520 – 96,865 = 39,655 GPD).

The proposed Light Industrial Node will be infill of an existing industrial park which is currently developed to the maximum 30% lot coverage allowed by CAFRA regulations. The existing industrial buildings, including the Henriques Boat Works operated by the

owner of the industrial park, are served by existing BTSA sewer lines which can be extended down road rights of way once the Node becomes recognized by Rule amendment by NJDEP. The additional 7.254 MGY (7.254GPY = 604,500GPM = 19,500GPD) added to the demand on the OCUA Central Water Pollution Control Facility is easily absorbed within the 5.407 MGD (167.617 MGM / 2011.404 MGY) current existing surplus capacity.

As with water infrastructure, wastewater infrastructure will need to be extended and upgraded to support the development anticipated as a result of the TDR program, although less so in the TC2 and Light Industrial Node which are infill areas where sewer lines do not need to be extended as far. Specific on-site and off -site improvements would be identified during the site plan review process and would be the responsibility of the redeveloper as specified in the redeveloper agreement in the case of Berkeley Town Center; and in developer agreements in the case of Town Center and Node C.

Stormwater Management

Berkeley adopted a Municipal Stormwater Management Plan (MSWMP) and associated ordinances in 2005 and 2006. The MSWMP outlines specific stormwater design and performance standards for new development. Additionally, the plan proposes stormwater management controls to address impacts from existing development. Preventative and corrective maintenance strategies are included in the plan to ensure long-term effectiveness of stormwater management facilities. The plan also outlines safety standards for stormwater infrastructure to be implemented to protect public safety. All future development in Berkeley Township must utilize the best available technology to minimize off-site stormwater runoff, increase on-site infiltration, simulate natural drainage systems and minimize off-site discharge of pollutants to ground- or surface water and encourage natural filtration functions.

Non-structural stormwater management measures are to be considered first and shall include site design and preventive source controls. To confirm the effectiveness of such measures, development proposals must verify the control of stormwater quantity impacts as detailed in the Stormwater Management rules.

The general standards for structural measures shall be incorporated as needed to meet the soil erosion, infiltration and runoff quantity standards included in the Township's Stormwater Ordinance. The design standards for the specific structural stormwater management measures are those included in the New Jersey Stormwater Best Management Practices Manual. Other designs or practices may be used if they are approved by the Ocean County Soil Conservation District. The design and construction of such facilities must comply with the Soil Erosion and Sediment Control Standards as well as any other applicable state regulation, including the Freshwater Wetland Protection Act rules, the Flood Hazard Control rules, the Surface Water Quality

Standards, the Coastal Area Facilities Review Act, Waterfront Development and Harbor Facilities Act, and the Dam Safety rules.

Stormwater runoff quality controls for total suspended solids and nutrient loads shall meet the design and performance standards as specified in the Stormwater Management rules. The minimum design and performance standards for infiltration and groundwater recharge specified in the Stormwater Management Rules must be met for all applicable development.

Currently, Berkeley requires all basins for major subdivisions to be owned and maintained by a private Homeowners Association. Basins for non-residential development are to be owned and maintained by the property owner or other official designated at the time of application to the applicable Board.

Stormwater management for the new development within the Receiving Areas will be addressed through site plan approval. Draft zoning regulations and design standards for the Town Center 2 and Node C Overlay Districts also apply Best Management Practices for the use of multiple rain gardens or bioretention basins to maximize groundwater recharge rather than channeling stormwater to streams (see Appendix). These more sustainable design practices are particularly important in light of the impacts of nutrient levels in the Barnegat Bay that have degraded water quality and caused decline of eelgrass beds that are critical to the sensitive estuary ecosystem.

Transportation

The Receiving Areas are strategically placed along the Route 9 corridor, which will serve as the main artery for each zone. In order to lessen the impact on the overall circulation system, development in each zone will be required to be consistent with Berkeley's 2008 circulation element and incorporate elements such as shared parking and access points, internal grids, linkages to adjoining uses and neighborhoods, pedestrian and bicycle facilities, and transit-friendly design. Where possible, the street network in the Receiving Areas will connect to or align with the rights-of-way of abutting street grids.

For the most part, internal roadways and sidewalks as well as NJDOT required improvements within the Route 9 right-of-way would have to be provided by prospective developers/redevelopers, as would be the case with any site development. Expansion of the public roadway system within the Receiving Areas would be assessed against the developer.

The Western Boulevard extension has been identified by the County as a vital improvement to help alleviate traffic congestion along Route 9. Two possible alignments are identified in the Township's circulation element. While the exact location of its intersection with Route 9 has yet to be determined, it is anticipated that Western Boulevard will extend to Route 9 within the northern half of Berkeley Town Center, most likely utilizing the proposed extension of Berkeley Avenue through the redevelopment site to a new signalized intersection with Washington Avenue that will replace the existing signal at Mizzen Avenue in Beachwood. Other improvements associated with Phase 1 of the Berkeley Town Center (not a receiving zone) include widening of Route 9 with additional lanes, including a two-way center left turn lane, from the Beachwood border to the southerly end of the Center, with associated intersection improvements (see example of concept plan for a typical segment below).

Figure IV- 3: Route 9 improvements, including widening, two-way center turn lane and intersection improvements are planned as part of Phase 1 of the Town Center

In addition to improvements to Route 9 associated with the development of Phase 1 of the Berkeley Town Center, there are intersection improvements, at a minimum, anticipated to be required in association with the redevelopment of Town Center 2, particularly with the potential expansion and re-configuration of the Berkeley Shopping Plaza (Shop Rite) and the opportunity to create a full signalized entrance at Frederick

Drive to enable a safe pedestrian crossing linking the high density residential development on the west side of Route 9 with the retail uses and potential new mixed use development within the shopping center. To reduce the number of traffic signals and mitigate against the need for a waiver for the separation between the existing signal at Moorage and the recommended new signal at Frederick, the roundabout proposed in the NJDOT's Route 9 Corridor Master Plan at the intersections of Korman and Ocean Gate Drive with Route 9, as well as a smaller roundabout at Veeder Lane, Mill Creek Road and Ocean Gate Drive, are proposed by the Township as part of the commitment of the State agency partners to Berkeley's Plan Endorsement Petition.

A schematic concept plan for the shopping center portion of Town Center 2, showing the suggested roadway improvements, is shown in Figure VI-2 (page 74), as taken from the Municipal Self Assessment Addendum submitted by the Township during Plan Endorsement.

As to non-vehicular connectivity, Ocean County is developing a rail to trail project along the former Barnegat Branch railroad right-of-way, which forms the western boundaries of the Berkeley Town Center and Node C. This trail has the potential to serve as an important pedestrian and bicycle link between the northernmost and southernmost

Receiving Areas. There is also some potential to link all three Receiving Areas to a larger proposed trail system.

BARNEGAT BRANCH RAIL TRAIL – BERKELEY TOWNSHIP SEGMENT

The primary mass transit opportunity in Berkeley is provided by NJ Transit Bus Route #559 which runs along Route 9 between Atlantic City and Lakewood. The nearest park and ride facility is in Toms River, approximately 3.5 miles from the center of Berkeley, where connections can be made to busses serving Newark and New York.

In a memorandum from NJ Transit to the Office of Smart Growth related to the SPC plan endorsement process, NJ Transit states that "*Given Berkeley's optimal access to NJ Transit services through the nearby Toms River Park-Ride, and that most residential pockets are either senior citizen developments with their own transportation services or are areas that are served by Ocean County-operated paratransit, it appears existing development and future growth will be adequately served by existing transit systems. Therefore, NJ Transit does not foresee expanding service to Berkeley Township. If more localized service is desired, the municipality should work with Ocean Ride to add service.*" Ocean Ride is a fixed-route service operated by the County of Ocean for the handicapped and elderly. Ocean Ride currently provides two bus routes that serve the eastern and western portion of the Township. The eastern route (OC7) operates Monday, Wednesday, and Friday and stops at the Bay Ridge Apartment complex off Route 9 (Town Center 2), the Berkeley Shopping Center on Route 9, Baywick Plaza on Route 9, and Ocean Gate Drive and Point Pleasant Avenue.. The western route (OC8) operates daily and makes several stops within the Holiday City and Silver Ridge adult/senior communities of Berkeley. While no discussions have taken place with the County regarding expanding the OC7 Route to serve the Berkeley Town Center once it

becomes developed, it is anticipated that the Center will become a popular destination for regular Ocean Ride patrons.

Given that it is unlikely that additional NJ Transit bus service will be provided in Berkeley, it is important to ensure that access to the existing service is enhanced whenever possible. To that end, the Land Use and Circulation Plan Element of the Township's Master Plan recommends concentrating growth in centers and nodes with transit-friendly design features that accommodate bus and shuttle service such as shelters, street furniture, and pull-off lanes within reasonable proximity to major uses and destinations. Bus stops will also be connected to the bike and pedestrian trail system being promoted in the Master Plan and land development regulations will incorporate bicycle storage facilities based on LEED rating systems. In addition, park and ride opportunities should be provided whenever feasible in the centers and nodes utilizing surplus retail parking during the off-peak daytime hours

Traffic improvements for the new development within the Receiving Areas will be addressed through site plan approval. Draft zoning regulations and design standards for the Town Center 2 and Node C Overlay Districts also apply Best Management Practices for the use of bicycle storage facilities, pedestrian crossings and pathways and bus stops/shelters (see Appendix).

Cost Sharing Formula

As most of the anticipated capital improvements associated with the buildout of the four Receiving Areas are roadway related with associated pedestrian walkways, the most conventional method of sharing these costs with regard to distributing them among future developers would be based upon the number of trips to be generated by each development as a percentage of the total number of trips accommodated by the improvement. For Phase 2 of the Berkeley Town Center, the principal improvement is the construction of Western Boulevard Extension at a cost estimated by the County Engineer to be 6 million dollars. This future County road is expected to be funded by a combination of Federal and County sources, but the last segment of the road, approximately 2,000 feet of around 2 miles of new road, would be constructed by the redeveloper of Phase 1 of the Berkeley Town Center. Actual contributions by future developers of Phase 2 are therefore difficult to determine at this time, but it is likely that contributions will be negotiated in future redevelopment agreements based upon the proportional number of trips generated by each project that will use the new road. Likewise, contributions to the cost of the final mile of the Barnegat Branch Trail may be negotiated with future developers of Phase 2.

However, for Town Center 2 and the Light Industrial Node, the capital improvements are expected to be made by the owners of the Berkeley Plaza (Shop Rite) shopping center and the industrial park on Hickory Lane, respectively. To the extent that other subsequent developments will benefit from the listed capital improvements, it is expected that recapture agreements will be used. Recapture agreements are agreements

made with an original developer and a government entity which allows the original developer to charge a "connection fee" to a new developer who connects to their improvement. This method has been used successfully for water or sanitary sewer. The developer pays for the entire improvement and hopes to recapture the cost as other developers connect to the improvement.

The cost of the two traffic signals anticipated for Node C are expected to be borne by the developers incrementally through the payment of an escrow fee to the Township designated for each project. Phases of development would be linked to the trip generation that would trigger the need for the signalization and payments made by developers of smaller projects would be applied to the overall cost of the two signals. If Node C is to be developed by a single developer, the traffic signal improvements would be required as part of the upfront site improvements and the escrow would not be necessary.

V. Procedures for conveying development potential

Basic Criteria

In general the rights to be transferred would be (1) the rights to develop single-family homes on lots ranging in size from 15,000 SF to 3 acres on 333 groupings of parcels zoned R-150, R-400, and CR in the Sending Area and (2) the conversion to residential development rights of current rights to construct commercial space at densities of 0.3 FAR on 17 groupings of parcels in comparatively under-developed commercial areas zoned RHB in the Sending Area.

Properties that are eligible for participation in Berkeley's voluntary TDR Program must be located in a sending or receiving zone as mapped and identified in this development transfer plan element and the Berkeley TDR Ordinance (see tables of Sending Area and Receiving Area parcels in the Appendix). Sending parcels must also meet the following criteria:

- A sending parcel shall not be owned by a government entity or public utility.

- A sending parcel must not be deed restricted from further subdivision or further development.

Sending zone and receiving zone properties that do not participate in the TDR program may be developed subject to the requirements of the Berkeley Land Development Ordinance, except that density bonuses for development in the receiving zones will be contingent upon the purchase of development credits. The Development Transfer Ordinance will also require per NJAC 40:55D-145(e) that variances granted on major development that increase the development potential by more than 5% will constitute a receiving zone and require the purchase of development credits.

Calculation of Development Potential

The proposed five Sending Areas include 333 privately owned groupings of parcels consisting of approximately 2,000 tax lots with 239.7 acres of land (calculated by totaling the lot area in the data base) in four zoning classifications out of the total of 840 acres (the remainder of the land within the Sending Areas, which are either the remaining 3,000 tax lots already owned by the Township or paper streets, calculated using GIS). Three of these four zoning classifications, including 549 parcels and 223.88 acres, provide for residential development of up to 391.4 units:

- 532 parcels totaling 49.891 acres are in the CR Zone. Under current zoning, only two

of these parcels groupings can accommodate a conforming lot, yielding 2 units of development. But the potential exists for further lot consolidation, with a maximum buildout of 16.6 housing units;

- 706 parcels totaling 76.137 acres are in the R-400 Zone. Under current zoning, only four of these parcels constitute conforming lots, yielding 12 units of development. But the potential exists for further lot consolidation, with a maximum buildout of 82.9 housing units;

- 677 parcels totaling 102.276 acres are in the R-150 Zone. Under current zoning, 24 of these parcels constitute conforming lots, yielding 79 units of development. But the potential exists for further lot consolidation, with a maximum buildout of 308.6 housing units;

- The RHB zoning classification includes 58 parcels and 7.418 acres and provides for development of up to 96,938 square feet of commercial space. For this TDR program, it is proposed that these commercially-zoned parcels be provided the right to transfer residential development potential to the Receiving Area at the ratio of one development credit per 15,000 SF of land. This alternative development credit program would result in 21.54 development credits being assigned to these 58 parcels.

Taken together, these 333 parcels in the Sending Area would have an allocation of 429.71 development credits (see Sending Area Credit Allocation Table in the Appendix).

General Criteria for Determining Development Rights for Transfer

A. The number of residential and non-residential development rights that any sending parcel is eligible to send to the receiving parcel has been determined in the Credit Allocation Table in the Real Estate Market Analysis by applying the TDR sending parcel base density established in subsections C and D of this section to the area of the sending parcel after any portion of the sending parcel already in a conservation easement or other similar encumbrance is deducted.

B. For purposes of calculating the amount of development rights a sending parcel can transfer, the amount of land contained within a sending parcel shall be determined as follows:
   (1) The square footage or acreage shall be determined:
      a. by the Ocean County Department of Assessments Records; or
      b. by a survey that has been signed and sealed by a Professional Licensed Surveyor of the State of New Jersey;

   (2) To the greatest extent possible, care was taken to include entire lots within a Sending Area. However, there are peculiarities in the lot configurations and ownership patterns near the boundary edges in

several locations where it is possible that a lot is split by a Sending Area boundary on the map. However the Credit allocation in the Real Estate Market Analysis (REMA) used entire lots and if any discrepancy occurs between the map and the Credit Allocation Table in the REMA (Table 11 in the Appendix), the Credit Allocation Table will control; and

(3) If the sending parcel consists of a lot that is divided by a zoning boundary, the square footage or acreage shall be calculated separately for each zoning classification. The square footage or acreage within each zoning classification shall be determined by the Berkeley Township record of the action that established the zoning and property lines, such as an approved lot line adjustment. When such records are not available or are not adequate to determine the square footage or acreage within each zoning classification, the Zoning Official shall calculate the square footage or acreage.

C. For the purposes only of the TDR program, the following TDR sending parcel base densities will be used to calculate the transferable density for residentially zoned properties participating in the TDR program:

(1) Sending parcels zoned CR at the time of the adoption of Berkeley's TDR Ordinance that participate in the TDR program shall have a base density of one-third dwelling unit per acre for transfer purposes only;

(2) Sending parcels zoned R400 at the time of the adoption of Berkeley's TDR Ordinance that participate in the TDR program shall have a base density of one dwelling unit per acre for transfer purposes only; and

(3) Sending parcels zoned R150 at the time of the adoption of Berkeley's TDR Ordinance that participate in the TDR program shall have a base density of three dwelling units per acre for transfer purposes only.

D. For the purposes only of the TDR program, the following TDR sending parcel base Floor Area Ratio (FAR) will be used to calculate the transferable non-residential floor area for industrial and commercially zoned properties participating in the TDR program:

1. Sending parcels zoned RHB Rural Highway Business at the time of the adoption of Berkeley's TDR Ordinance that participate in the TDR program shall have a base FAR of 0.3 for transfer purposes only.

E. For the purposes only of the TDR program, residential dwelling units calculated in accordance with subsection C above, may be converted to non-residential floor area at a rate identified in the Real Estate Market Analysis; and non-residential floor area calculated in accordance with subsection D above, may be converted to

residential dwelling units at a rate identified in the Real Estate Market Analysis. The converted development potential may only be used in a mixed-use development project that includes a ratio of residential and non-residential uses at a rate approved by the Planning Board.

F. The determination of the number of development rights a sending parcel has available for transfer to a receiving parcel shall be valid for transfer purposes only, shall be documented in a TDR easement and shall be considered a final determination, not to be revised due to changes to the sending parcel's zoning. The allocation of development rights (credits) is set forth in the Real Estate Market Analysis, prepared by Urban Partners and adopted by the Berkeley Township Planning Board.

Sample Sending Parcel Calculation

Residential Property
Parcel Size = 0.454 acre
Base Zoning = R150 (max density = 2.904 dwelling units per acre – 15,000 sq. ft. min lot)
TDR Credit Calculation: 0.454 x 2.904 = 1.31 development credits

Rural Highway Business (RHB) Property
Parcel Size = 10,000 square feet
TDR Credit Calculation: 10,000 / 15,000 sq ft per Credit = 0.66 development credit .

Appeal of Credit Allocation

Any landowner eligible for participation in a TDR program who is dissatisfied with their credit allocation may appeal their allocation in accordance with the procedures set forth in the Development Transfer Ordinance and generally outlined below.

1. Any appeal of a credit allocation must occur prior to the recording of a TDR easement. Once a property is restricted through the recording of the TDR easement, the opportunity for an allocation appeal is lost and the parcel's owner shall be irrefutably presumed to have elected to accept the allocation given as an appropriate measure of the development potential of the parcel.

2. The basis of the credit allocation appeal shall be the availability of more detailed information, such as a valid site plan or subdivision approval or survey prepared by a licensed land surveyor, that results in a higher development potential of a specific property than was determined in the allocation plan.

3. The parcel owner shall submit a properly completed notice of appeal and required application and review fees to the Planning Board Secretary. The notice

on forms approved by the Township Planning Board shall include the following information:

a. Date of appeal.

b. Name(s) and mailing address(es) of all property owners.

c. Copy of the latest deed to the property.

d. Block and lot number(s) of parcel(s).

e. Acreage of parcel(s) pursuant to Tax Map or property survey.

f. Number of TDR credits allocated to the parcel(s) pursuant to the allocation plan.

g. Number of TDR credits the landowner is requesting as yielded under the appeal provided.

h. Supporting documentation which fulfills the requirements set forth in (2) above.

i. Signature of all property owners.

4. The Planning Board Secretary shall forward the notice of appeal and all related information to the Planning Board Engineer. The Engineer shall review the submission for accuracy and compliance with the requirements set forth herein. The Engineer will advise the Planning Board of his findings.

5. The Planning Board at a regular or special meeting shall, after giving due consideration to the Engineer's report and any additional information which the parcel owner or others wish to submit, grant the appeal if the parcel owner's proof demonstrates that the parcel on the date of this section's adoption had a development potential stated in credits greater than that originally allocated. Otherwise the application should be denied. Public notice of the meeting shall not be required.

6. The Planning Board shall take action on the appeal if all required documents are submitted within 120 days of receipt of the notice of appeal by the Planning Board Secretary, unless this time period is extended by the applicant.

7. Should the Planning Board approve the appeal, it will so direct the Secretary to amend the allocation plan to reflect the number of credits approved.

Declaration of Enrollment

A landowner seeking to enroll land within the TDR program and thus create credits, which may thereafter be transferred, shall conform to the following procedures:

A. The landowner, on forms authorized by the Planning Board and obtained from the Township Clerk, shall submit to the administrative officer:

(1) One original and two copies of the fully completed enrollment application;

(2) Review fees;

(3) One original and two copies of the TDR easement containing general reservation language for future rights-of-way and easement areas that may be needed for state, county and municipal infrastructure, including but not limited to future roadways and drainage improvements, which areas shall be exempted from the restrictions against future development required under this chapter; and

(4) Clear proof of title.

B. The administrative office shall, within 45 days of receipt, determine that the application:

(1) Accurately specifies the number of TDR credits available to the parcel;

(2) Covers a parcel of land eligible for inclusion with the TDR program (privately owned vacant lot within a delineated Sending Area as depicted on one of the Sending Area Maps included within this TDR Element and listed in Appendix Table 11);

(3) Accurately sets forth the block and lot description of the parcel seeking enrollment; and

(4)

Contains all other information required by the enrollment application.

C. The administrative officer, upon receipt, shall forward to the Township Attorney for review:

(1) One copy of the enrollment application;

(2) The original and one copy of the TDR easement;

(3) Clear proof of title;

(4) A copy of each of the foregoing documents shall be sent by the administrative officer to the Ocean County Planning Board for that Board to determine the nature and extent of any areas which should be withheld from the easement for future infrastructure purposes. The County Planning Board shall have 14 days within receipt of the required documentation to advise the administrative officer and Planning Board Attorney of its concerns and comments;

D. The Township Attorney shall determine within 14 days of receipt of any County Planning Board concerns that:

(1) The TDR easement is in a proper legal form for recording in the County Clerk's office; and

(2) The applicant for enrollment holds legal title clear of any encumbrances to the parcel or that the holder of any lien, mortgage or other interest has agreed in writing to subordinate their interest in the parcel to the public interests set forth in the TDR easement.

E. Upon determining the facts set forth in Subsection D1 above, the Township Attorney shall certify to these facts by:

(1) Signing the TDR easement at a space provided; and

(2) Returning the original TDR easement to the administrative officer for processing.

F. Upon return of the original TDR easement signed by the Township Attorney, the administrative officer shall:

(1) Assign serial numbers to each TDR credit sought to be created;

(2) Sign the TDR easement form, certifying that the application procedures required by this chapter have been followed and that, upon proper recording of the TDR easement, the parcel will contain the number of transferable credits specified within the certification, provided that the TDR easement is recorded within 90 days from the date that the certification is signed. If unrecorded, the enrollment shall be null and void, and the landowner must reapply; and

(3) Return the original and signed TDR easement to the landowner for recording in the book of deeds in the office of the Ocean County Clerk.

G. If the administrative officer or Township Attorney fail to act within the time periods specified, unless these time periods are extended by the applicant, the application shall be deemed denied.

H. The landowner, upon recording the TDR easement with the county, shall file proof of the recording with the administrative officer prior to the approval of any transfer of any credit created under the easement.

I. Upon receipt of proof that a TDR easement has been recorded, the administrative officer shall:

(1) Record the fact of recordation upon the records of the township. This record shall include the Clerk's assigned book and page of recording; and

(2) Forward a copy of the recorded TDR easement to the Planning Board for its information.

(3) Forward recorded easement and credit enrollment information to the New Jersey State TDR Bank within 10 business days of receipt of proof of easement recording.

(4) Record easement and credit enrollment information in the Township's TDR registry.

J. The landowner shall be responsible for all costs associated with the review of the enrollment application, including professional fees authorized by the Land Development Ordinance.

K. The administrative officer shall act on all applications submitted in the order in which they are submitted

TDR Credit Assignment

A landowner against whose land a TDR easement has been recorded, or subsequent credit holder (Assignor), may assign any of the credits created to an Assignee utilizing the following procedures.

A. The Assignee, on forms authorized by the Planning Board and obtained from the Township Clerk, shall submit to the administrative officer for review:

(1) One original and two copies of the application for assignment;

(2) One original and two copies of the assignment document; and

(3) Appropriate review fees.

B. The administrative officer, within 45 days, shall determine that the application:

(1) Contains all of the information required by the form;

(2) Seeks to assign no more than the maximum number of credits available and not already assigned or extinguished;

(3) Provides the recording information about the TDR easement;

(4) Accurately reflects the information contained in it; and

(5) Reflects that no material change in the title of the credit has occurred since the TDR easement was recorded.

C. Upon determination by the administrative officer that the application and supporting documentation establishes the criteria set forth in Subsection B above, the application shall be referred to the Township Attorney for review and determination that the Assignment is ready for recording.

D. Upon receipt of a determination by the Township Attorney that the Assignment is ready to be recorded, the administrative officer shall sign the Assignment, certifying that upon recording the Assignment will transfer the number of credits contained within it to the party named. If the Assignment is not recorded within 90 days of the date that the certification is signed, unless this time period is extended by the applicant, the Assignment shall be null and void.

E. If the administrative officer fails to act within the time period provided, the application shall be deemed denied.

F. Upon signing, the assignment shall be returned to the Assignee for recording in the book of deeds in the office of the Ocean County Clerk.

G. The Assignee, upon filing of the Assignment, shall file proof of recording with the administrative officer prior to the approval of any credit use.

H. Upon receipt of proof that the Assignment has been recorded, the administrative officer shall:

(1) Record the fact of recordation upon the records of the township. The record shall include the Clerk's assigned book and page of recording;

(2) Forward a copy of the recorded Assignment to the Planning Board for its information;

(3) Forward assignment information to the New Jersey State TDR Bank within 10 business days of receipt of proof of assignment recording.

(4) Recorded assignment information in the Township's TDR registry.

I. Assignee shall be responsible for all costs associated with the review of the assignment application, including professional fees authorized by the Land Development Ordinance.

J. The administrative officer shall act on all applications in the order in which they are received.

TDR Credit Use; Extinguishment

An owner or developer of land located within a receiving zone may utilize credits held by a landowner of land located within a sending zone or his assigns to increase the number of units that may be developed by utilizing the following procedures.

A. The owner/developer of land within the receiving zone must first obtain final approval for the development of a project within the receiving zone contingent and conditioned on the acquisition and extinguishment of TDR credits.

B. To meet the condition of approval, the owner/developer, at or prior to the signing of a subdivision plat or the issuance of the first building permit, whichever occurs first, on forms approved by the Planning Board and obtained from the Township Clerk, shall submit to the administrative officer:

(1) One original and two copies of completed application for TDR credit use;

(2) One original and two copies of each and all deed of credit transfers; and

(3) All appropriate fees for review.

C. The administrative officer shall, within 45 days of receipt, determine that the application:

(1) Accurately specifies the number of TDR credits needed for the development of the parcel sought to be developed;

(2) Demonstrates that the developer owns, by assignment or otherwise, all credits needed for the proposed development;

(3) Accurately specifies by reference to assigned serial numbers or otherwise which credits are being used by the development;

(4) Accurately provides such other information required by the application; and

(5) Demonstrates that the parcel from which the credits arise are subject to a recorded TDR easement.

D. If the administrative officer determines that the application and supporting documentation establishes the criteria set forth in Subsection C above, the administrative officer shall sign the deed of credit transfer. This signing will certify that upon recording, the deed of credit transfer will permanently transfer the number of credits contained within it to the parcel of land cited. If the deed of credit transfer is not recorded within 90 days of the date that the certification is signed, unless this time period is extended by the applicant, the deed of credit transfer shall be null and void.

E. If the administrative officer shall fail to act within the time periods provided, the application shall be deemed denied.

F. Upon signing, the deed of credit transfer shall be returned to the owner or developer of the land for recording in the book of deeds in the office of the Ocean County Clerk.

G. The owner or developer of the land using the credits, upon filing of the deed of credit transfer, shall file proof of recording with the administrative officer prior to the issuance of any building permit for development of the land upon which the credit is to be used.

H. Recording the deed of credit transfer shall extinguish the ability to use any credit transferred except upon the parcel to which the TDR credit has been transferred.

I. Upon receipt of proof that the deed of credit transfer has been recorded, the administrative officer shall:

(1) Record the fact of recordation upon the records of the township. The record shall include the Clerk's assigned book and page of recording;

(2) Forward a copy of the recorded deed of credit transfer to the Planning Board for its information;

(3) Forward transfer information to the New Jersey State TDR Bank within 10 business days of receipt of proof of deed of credit transfer recording.

(4) Forward a copy of the recorded deed of credit transfer to the Berkeley Township Tax Assessor for purposes of property value assessment of both the sending parcel and receiving parcel of the development credit transfer; and

(5) Recorded transfer information in the Township's TDR registry.

J. The owner or developer of the land shall be responsible for all costs associated with the review of the assignment application, including professional fees authorized by the Land Development Ordinance.

K. The administrative officer shall act on all applications in the order in which they are received.

Reassignment and Disenrollment

The TDR Program has been designed to provide a reasonable balance between the number of credits allocated to the sending areas and the capacity of the Receiving Areas to accommodate transferred credits. It is possible, however, that for various legitimate reasons, the Receiving Areas cannot utilize all of the credits created in the sending areas. Should a landowner, or the assignee, owning a parcel of land enrolled within a TDR program determine that they have an inability to utilize credits within the receiving zone, application may be made to the Planning Board for reassignment of the credits to the parcel from which they originated or disenrollment of the parcel from the TDR program upon the showing of just cause in accordance with the procedures set forth below.

Reassignment

An assignee seeking to reassign any of the credits which have previously been assigned by a landowner may seek to reassign the credits obtained, absent any bonus, back to the parcel from which they originated by using the following procedures:

A. The assignee on forms authorized by the Planning Board and obtained from the Township Clerk shall submit:

(1) One original and two copies of the application for reassignment;

(2) One original and two copies of the reassignment document; and

(3) Appropriate review fees to the administrative officer for review.

B. The administrative officer, within 45 days, shall determine that the application:

(1) Contains all of the information required by the form;
(2) Seeks to reassign all or a portion of the credits, absent any bonus, previously assigned to the assignee back to the parcel from which the credits came;

(3) Provides the recording information about the TDR easement and original assignment; and

(4) Reflects that no material change in the title of the credit has occurred since the assignment was recorded.

C. If the administrative officer determines that the application and supporting documents are complete, this official shall schedule the matter for a hearing before the Planning Board at its next regular or special meeting called for this purpose.

D. The Planning Board shall at the regular or special meeting during which the matter is considered, conduct a hearing on the application. If the Planning Board determines, after considering all evidence submitted both in favor of and opposing the application, that, through an inability to use the credits within the receiving zone or through other just cause, it is not feasible to expect that the credits will be usable within a reasonable time frame and both the assignee and the landowner agree to a reassignment of the credits, the Board shall grant the assignee the right to reassign the credits provided. Otherwise, the application should be denied. Public notice of the meeting shall not be required.

(1) The Planning Board shall take action on the application within 45 days of its receipt by the Planning Board Secretary. If the Planning Board fails to act, the application shall be deemed denied.

(2) Should the Planning Board approve the application, it will direct its Chairman and Secretary to certify to this fact on the original reassignment document, which is to be delivered to the applicant for recording in the book of deeds in the office of the Ocean County Clerk. The reassignment document is to be recorded within 90 days from the date that the certification is filed, unless this time period is extended by

the applicant. If unrecorded, the appeal of the reassignment shall be invalid and the assignee must reapply to obtain relief.

E. The assignee, upon recording the reassignment document, shall file proof of the recording with the administrative officer. Until such proof is filed, reassignment of the credits shall be ineffective:

F. Upon receipt of proof that a reassignment document has been recorded, the administrative officer shall:

(1) Record the fact of the reassignment upon the records of the township. This record shall include the Clerk's assigned book and page of recording.

(2) Forward a copy of the recorded reassignment document to the Tax Assessor and Planning Board for their files.

(3) Forward reassignment information to the New Jersey State TDR Bank within 10 business days of receipt of proof of reassignment document recording

(4) Recorded reassignment information in the Township's TDR registry.

Disenrollment

To disenroll land from involvement with the TDR program, a landowner shall utilize the following procedures.

A. The landowner, on forms authorized by the Board and obtained from the Township Clerk, shall submit to the administrative officer:

(1) One original and two copies of a fully completed disenrollment application;

(2) Review fees;

(3) One original and two copies of the disenrollment document designed to terminate the restrictions imposed upon the landowner's property;

(4) Clear proof of title; and

(5) Proof that none of the credits created for the property by enrollment have been used by another property owner or developer through the

filing of a deed of credit transfer or assigned to a third party who does not consent to the disenrollment application.

B. The administrative officer shall determine within 45 days of receipt thereof that the application is complete.

C. Upon determining that the application is complete, the administrative officer shall schedule a public hearing before the Planning Board on notice to the public and to the Ocean County Department of Planning. At this hearing, the Planning Board shall determine whether a hardship exists to the landowner through an inability to utilize his credits within the receiving zone or for other good and sufficient reasons the public's interest would be served by allowing relief from the restrictions imposed under the TDR program. In reaching this conclusion, the Planning Board shall take into consideration all evidence, both submitted in favor of and in opposition to the relief request, in accordance with the procedures normally available for development applications before the Board. After this review, the Board shall reduce its findings to a written resolution recommending to the Township Committee whether to grant or deny the application proposed. If the Board fails to act within 90 days of the date the application is submitted, unless this time period is extended by the applicant, the application shall be deemed denied.

D. If the application is approved, the record before the Board, including its findings, shall be submitted to the Township Committee and to the applicant. The Township Committee shall review the proceedings before the Planning Board and determine whether good cause exists for the relief specified. If they agree that the relief should be granted, they shall direct the Mayor and Township Clerk to execute the disenrollment document.

E. Upon execution by the Mayor and Clerk, the disenrollment document shall be forwarded to the applicant to be recorded in the book of deeds in the office of the Ocean County Clerk.

F. The applicant, upon recording the disenrollment document, shall file proof of the recording with the administrative officer.

G. Upon receipt of proof of recording of the disenrollment document, the administrative officer shall:

(1) Record the fact that the disenrollment document has been recorded on the township records, including the Clerk's assigned book and page of recording, if known; and

(2) Forward a copy of the recorded disenrollment document to the Tax Assessor and Planning Board for their files.

(3) Forward disenrollment information to the New Jersey State TDR Bank within 10 business days of receipt of proof of disenrollment document recording.

(4) Recorded disenrollment information in the Township's TDR registry.

H. The assignee and/or landowner seeking either reassignment or disenrollment shall be responsible for all costs associated with the review of the reassignment or disenrollment, including professional fees authorized by the Land Development Ordinance.

I. The assignee and/or landowner may extend the time limits for administrative action by the administrative officer or by the Board. This right to extend shall not apply to any time period set forth in this chapter for recording of a document.

State TDR Bank

In accordance with N.J.S.A. Chapter 40:55D-147e, all potential development transfers shall be recorded with the State Transfer of Development Rights Bank in the Development Potential Transfer Registry and shall do so within 10 days thereof, pursuant to N.J.S.A. 4:1C-53.

VI. Objectives and Design Standards

Program Objectives

As noted in the Introduction, Berkeley Township conducted a public visioning process in 2002-2003 to identify long-range goals for the Township's physical, recreational, business, and community development particularly within the eastern mainland section of the Township. The visioning process focused on determining areas for development and conservation, the desired and appropriate locations and intensities of land uses, and community design. The process resulted in a 2020 Vision Statement that departs from trend by establishing centers and nodes as the primary targets for future development while preserving a substantial portion of the Township as open land. The TDR program is just the latest in a series of actions that the Township has undertaken to realize that vision.

The specific objectives of the TDR program are to:

- Preserve undeveloped wooded areas that are being incrementally developed in an unplanned fashion and without public infrastructure;
- Guide that growth to well-designed centers and nodes along the Route 9 corridor that can be efficiently served by public infrastructure;
- Develop and enforce design standards to ensure that the Receiving Areas develop in a manner that provides quality working and living environments, maximizes circulation and mobility options, and generally benefit the Township's social, environmental, and economic quality of life.

Design Standards

All Receiving Areas

Although the Receiving Areas vary in terms of size, character, and the capacity to accept additional development, they are all located in the Route 9 corridor. They have all either contributed to or been impacted by the standard strip development format that has resulted in a corridor that is lacking a sense of place or community; and is often associated with congestion, inconvenience, inefficiency and a less than desirable visual image. The overriding design objective is to encourage a new design paradigm in the Receiving Areas that will:

- Promote a diverse mix of residential, business, commercial, office, institutional, educational, recreational and cultural and entertainment activities for workers, visitors, and residents;
- Encourage pedestrian-oriented development at densities and intensities that will help promote transit usage and interconnected uses;
- Promote the health and well-being of residents by encouraging physical activity, alternative transportation options and greater social interaction;
- Create centers and nodes that represent a unique, attractive and memorable destination for visitors and residents;
- Encourage lively, human-scaled activity areas and gathering places through the promotion of high-quality urban design;
- Ensure that all buildings are consistent with and enhanced by high-quality streetscape amenities; and
- Accommodate off-street parking in a convenient manner that does not interfere with the rhythm of the street network and building façades.

The following standards are to be applied to all new development and redevelopment in the Receiving Areas. The standards are to be applied within the context of the more individualized zone concepts that are discussed below.

1. Plazas, courtyards and green areas should be considered an integral component of all development in the Receiving Areas and should be designed to provide a lively human scale environment. These features should also be designed to protect environmentally sensitive features, and provide appropriate visual and noise buffers especially between residential and non-residential areas.

2. Buildings should be designed to provide architectural interest and avoid a monolithic box-like appearance. Pitched roofs and architectural embellishments such as dormers are encouraged. Flat roofs should include appropriate ornamentation such as cornices or parapets. The front of each building should be oriented toward a sidewalk, courtyard or street. Sidewalks should facilitate pedestrian movement and create opportunities for outdoor eating and shopping areas, and providing space for bus waiting areas or shelters, street furniture, etc.

3. Ground floor commercial facades should have large, clear storefront glass areas to display the nature of the business and produce an interesting streetscape. A storefront should be separated from the roofline or a second floor by a horizontal architectural element such as a sash, cornice, frieze or molding. The design of awnings and canopies should be architecturally compatible with the style, materials, colors and details of buildings and should not conceal significant architectural features, such as cornices, columns, pilasters or other trim details.

4. Freestanding signs should be consolidated at strategic locations, complement the architectural style of the development, avoid a cluttered appearance, and be limited to the name and logo of a project or center. Tenant directory signs should

be located away from the right-of-way. Façade signs should complement and not interfere with, be out of proportion with, or cover over a building's architectural details.

5. Mass transit opportunities should be enhanced through the incorporation of design features that accommodate bus and shuttle service such as shelters, street furniture, and pull-off lanes within reasonable proximity to major uses and destinations.

6. Oversized parking areas and multiple and uncontrolled access points should be reduced through the use of shared and connected parking facilities.

7. Parking lots should be located behind or next to buildings, so that the buildings can be closer to the roadway, be more visible, and be more accessible to pedestrians.

8. Surface parking lots should be extensively landscaped to provide visual relief from large expanses of parking, to guide circulation, and to minimize impervious coverage.

9. Landscaped areas should be provided along the highway edge and include provisions for walkways, bike paths, plantings, and shade trees. There should be no parking or outside display or storage of materials or merchandise in a required front yard area.

10. When a written agreement is provided by adjoining property owners, no side yard will be required between properties of separate ownership where two or more commercial uses abut side to side. A series of abutting structures paralleling a public right-of-way should provide an unobstructed passage of at least 30 feet in width at intervals of not more than 200 feet.

11. As viewed from the street, buildings should have at least 50% of the front façade located as close to the street line as is allowed in the schedule of area requirements.

12. A required rear yard that is adjacent to a residential zone should be no less than the rear yard requirements in the adjacent residential zone.

13. Landscaped areas should be provided along the highway edge in accordance with Diagrams 1-3 below.

14. Whenever feasible, mass transit opportunities shall be enhanced through the incorporation of design features that accommodate bus and shuttle service

such as shelters, street furniture, and pull-off lanes within reasonable proximity to major uses and destinations.

15. Off-street parking spaces should be provided on the same lot as the use which they are intended to serve or on an adjacent lot in common ownership.

16. Shared parking arrangements among adjacent properties not under common ownership will be encouraged if the owners demonstrate to the satisfaction of the Planning Board that the supply of parking spaces will be adequate to service the aggregate demand of the uses sharing the parking based on such factors as alternating peak hours; and that the shared arrangement will allow a reduction in impervious coverage of the site below the maximum permitted in the zone and will provide a more efficient circulation pattern including a reduction in curb cuts and access points on Route 9.

17. In no case should the number of parking spaces exceed the minimum requirements by more than 5%.

18. General Corridor Plan – Diagrams 1, 2 and 3 depict the overall design concept to be achieved along the corridor.

19. The proportion and distribution of building heights may be varied by the Planning Board upon presentation of more detailed architectural plans for the various sections of the PCD that evidences a preferable design alternative such as articulating corners as illustrated below. An overall ratio of 1 foot of building height per 3 feet of street width on both sides of a street (or 1.5 feet of distance between building and street centerline on one side of a street) shall be maintained for 15% of all new building frontage (see Figure VI-1 below).

Figure VI-1: The ratio of building height to street width is the average taken along a block front. In the illustration below the average ratio is greater than 1:1.5 for one side of the block.

Diagram 1

CORRIDOR PLAN

Diagram 2

SECTION WITHIN CORRIDOR

Diagram 3

DRIVEWAY CROSSINGS:

20. *Land Coverage* – Total impervious coverage should be kept to a minimum but in no case shall it exceed 30% of the total tract except that the impervious surface coverage may be increased beyond 30% with the purchase of Development Credits through the Berkeley Township Transfer of Development Rights Program per Article XX of the Land Development Ordinance. The amount of additional impervious surface coverage permitted beyond 30% for each additional section of development shall be the minimum required for the

buildings and associated parking for that section based upon the total number of Development Credits used in that section. The developer must show compliance with all applicable wetland, stream encroachment and storm water requirements and the requisite purchase of Development Credits or recorded easements documenting the transfer of Development Credits to the project site.

Berkeley Town Center

Berkeley Town Center is the largest of the Receiving Areas and certainly has the most potential. The Township has already adopted a comprehensive Town Center Redevelopment Plan and a supporting Town Center Ordinance, which govern all proposed development within this zone and provide detailed guidance for design objectives and standards to the Berkeley Township Planning Board. As Berkeley Town Center is also a designated redevelopment area, specific requirements and responsibilities, including the need for purchasing TDR credits, will be articulated in one or more redeveloper agreements with one or more redevelopers.

The goal for the Berkeley Town Center is to promote the development of a compact, pedestrian-oriented community with the potential for 24-hour activity, consisting of high-intensity retail and employment facilities, vibrant and dynamic mixed-use areas, open space and recreation facilities, and residential living environments that provide a broad range of housing types for an array of housing needs. The site will be noted for its carefully planned open spaces, traditional "downtown" feel, housing and commercial opportunities, pedestrian accommodation, and efficient roadway and transportation connectivity. With the creation of a mixed-use, pedestrian oriented town center, the Site will exist as a hub for community interaction, including the provision of space for civic activities, such as the ability to have a community parade along the envisioned "Main Street" focal point of the center. (See Figure VI-1)

FIGURE VI-2 BERKELEY TOWN CENTER CONCEPT SKETCH

Town Center 2

This "secondary" Town Center provides opportunities for retrofitting existing development with the goal of forging a strong pedestrian link between the high density residential development on the west side of Route 9 with the commercial area anchored by the Shop Rite supermarket on the east side of Route 9 while promoting better quality design and landscaping, shared parking, and more controlled access to Route 9. (See Figure VI-2). The coordination of residential and nonresidential expansion of development within the existing shopping center site on the east side of Route 9 in TC2 will occur through a concept plan prepared by the property owner of the shopping center, who controls all of the remaining land that is developable upon recognition of the Center through amendment to the CAFRA Rules. The concept plan will provide for the re-planning of the existing buildings and integration of new retail and residential buildings as well as alterations to the internal vehicular and pedestrian circulation systems in conjunction with the proposed traffic signal and new entrance opposite Frederick Drive.

FIGURE VI-3 TOWN CENTER 2 CONCEPT SKETCH

Corridor Node

Node C, which is the southernmost receiving zone, is located primarily on the southbound side of Route 9 in the vicinity of Harbor Inn Road. The zone covers 145 acres and is sparsely developed with the predominate use being an abandoned mining operation with small commercial uses fronting Route 9. Although smaller and less intense than Berkeley Town Center, Node C will incorporate many of the same smart growth principles that will create a mixed-use, pedestrian oriented village atmosphere. This site also has great potential to incorporate the Barnegat Branch Trail as an amenity and host a visitor center. A concept plan has been developed for this node to ensure that its development conforms to smart growth principles (see Figure VI-3). The concept plan envisions two principal entrances to the new mixed-use village within Node C, one using the existing extension of Harbor Inn Road that now serves as the entrance to Cedar Creek Campground and the other opposite the existing single family neighborhood on the east side of Route 9 to the south of Yesterday's Restaurant that would serve as the "Main Street" of the village and contain neighborhood retail and potentially some limited mixed use buildings leading to higher density townhomes,duplexes and multi-family residential dwelling units. The perimeter of the village would transition down in density to smaller lot single family homes along the Barnegat Branch Trail, where the main road would connect to a future single family neighborhood adjacent to the Eastern Avenue Soccer Complex.

This zone has the potential to yield an additional 616 dwelling units and 147,000 square feet of commercial space.

Light Industrial Node

The proposed Light Industrial Node will be infill of an existing industrial park which is currently developed to the maximum 30% lot coverage allowed by CAFRA regulations. The existing industrial park can be extended down road rights of way once the Node becomes recognized by Rule amendment by NJDEP as a CAFRA Node and the CAFRA impervious coverage is increased. The LI Zone regulations will be amended to set the lot coverage at the existing 30% CAFRA limit and then provide for up to 70% lot coverage (potentially creating an additional 110,000 square feet of warehousing and 150,000 square feet of light industrial space) predicated on the purchase of development credits.
